## Chapter 2 Betalingservice overview

*Betalingservice is a payment service used by various organizations in Denmark.*

Services offered.....	11
Collections and notifications.....	11

## Services offered

Betalingservice is intended for periodic and recurrent payments from debtors. However, it can also be used by creditors to initiate one-off payments, such as surplus amounts paid to debtors' accounts if the creditor is approved by their bank.

**Table 4: Services offered**

Service	Description
BS Automatiske betalinger (automatic payments)	Enables creditors to send collection data to Betalingservice. Based on these, the Betalingservice provides a prenotification to debtors and moves money from the debtors' accounts on the due date.
BS Indbetalingskort (payment slips)	Contains payment information (based on a physical or electronic form sent to the debtor) that is used to complete the payment from the debtor to the creditor. A payment slip may include explanatory text lines and may be accompanied by information relating to the specific collection.
BS Medsend bilag (Merge Enclosure)	Allows the creditor to dispatch customized or identical enclosures to all customers together with the Betalingservice prenotification and payment slips.

For more information about the products, contact information, and opening hours, see [www.betalingservice.dk](http://www.betalingservice.dk).

## Collections and notifications

Betalingservice supports multiple collection types and can notify the debtors in multiple ways.

## Chapter 3 Getting started

*Before you can use the Betalingsservice, we recommend that you complete the required prerequisites.*

Agreements required.....	13
Testing .....	13

## Agreements required

Before you can use Betalingservice, you must complete the required agreements.

**Table 6: Agreements**

Agreement	Description
Data supplier agreement	The Data Supplier agreement is a prerequisite for data communication with Betalingservice. It is the legal entity that concludes the agreement and exchanges creditor data with Betalingservice. The data supplier can be the creditor or an independent external supplier selected by the creditor.
Customer agreement (creditor)	The creditor must enter into a customer agreement with Betalingservice to use automatic payments and payment slips. After the creditor is registered, a PBS number is assigned for use as a unique identifier for collections and the debtors' registration of mandates.
Delivery agreement (creditor/ data supplier)	<p>The delivery agreement is a set of one or more agreements that the creditor or the creditor's data supplier has with Betalingservice to determine:</p> <ul style="list-style-type: none"> <li>• which deliveries the creditor exchanges with Betalingservice</li> <li>• when deliveries are exchanged with Betalingservice</li> </ul> <p>Delivery agreements require no signature, but are based on the selections the creditor has made in the creditor and similar agreements.</p>

## Testing

When implementing Betalingservice, Mastercard recommends testing to ensure a seamless experience.

Before implementation is completed, Mastercard recommends that you conduct a test with the data from and to the data supplier. Testing should include:

- A test of the standard delivery structure.
- A test of the communication between the data supplier and Betalingservice.

The timing and scope of the testing can vary and is agreed on for each individual project with a consultant from [Betalingservice](#).

Mastercard also recommends that you perform testing for any changes made. For example, when an operating system is replaced, there may be changes to character sets. Therefore, we recommend that you run a test for the collection file and any attachments before the change goes into production.

<a href="#">Data delivery BS 0621 – Digital oplysningsdata</a>	Electronic information data	Electronic information data with ongoing status of collections and debtor mandates (optional).
<a href="#">Data delivery BS 0686 – Status på BS Indbetalingskort</a>	Payment slip status	This delivery contains information on how the individual payment slips were supplied to the debtor. The delivery can also contain information of nonplaceable digital payment slips (optional).

Delivery type	Category	Description
Data delivery BS XML000 – Opkrævningsdata og BS Medsend bilag	Collection and Enclosure information	This delivery contains information for use in creating BS Medsend bilag data. See the various formats in the data record layout (optional).

## Delivery structure

All deliveries must comply with the guidelines for the structure of the data delivery.

A delivery may contain multiple sections. Also, it is possible that a random number of sections are included in a delivery (from section start record to end of section record).

**Table 8: Data delivery structure**

Record type	Description
Delivery start record	Identifies the recipient or sender, delivery type, and delivery's creation date.
Section start record	Contains information about the following: <ul style="list-style-type: none"> <li>User's PBS number in the CVR</li> <li>Section number (identifies section type)</li> <li>Section's creation date</li> </ul>
Data records	Include the individual data records relevant to the section.
End of section record	Contains information about the following: <ul style="list-style-type: none"> <li>Record type</li> <li>Numeration fields</li> <li>Section number</li> </ul>
End of delivery record	Contains information about the total number of sections in the delivery.

## Data delivery frequency

Data is sent from Betalingservice to the data supplier using standard frequency intervals.

If needed, the data supplier can request for a variation in data delivery intervals for certain data deliveries in the delivery agreement. For more information, see the price list at <http://www.betalingservice.dk>.

**Table 9: Betalingservice data delivery frequency**

<b>Delivery type</b>	<b>Frequency</b>
Data Delivery BS 0601 – Opkrævningsdata (Collection data)	Collection data for automatic payments and payment slips can be submitted throughout the month until the deadline set by Betalingservice.
Data Delivery BS XML000 - Opkrævningsdata (Collection data)	<p>Collection data for payment slips sent out independently, can be submitted at any time during the month, independent of the creditor's collections. For more information on the delivery deadlines, see <a href="http://www.betalingservice.dk">www.betalingservice.dk</a>.</p> <p>Collection data with section 0112, should be delivered before 11:00 on the sixth last Danish banking day.</p> <p>For Betalingservice to process data at no extra charge, the validation receipt from the data sent to Betalingservice must have a time stamp earlier than 18:30 on sixth last Danish banking day.</p> <p>As stated in the price list, delivery of collection data to Betalingservice, where the time stamp of the validation receipt is in the time frame between the sixth last Danish banking day at 18:30 to the third last Danish banking day at 18:30 will be invoiced at extra charge.</p>
Data Delivery BS 0602 - Payments information	<p>Sent daily, by default or can be set to one of the following:</p> <ul style="list-style-type: none"> <li>• On the payment due date containing information on completed (0236), rejected (0237), cancelled (0238), and completed by payment slip (0297).</li> <li>• After the expiry of the rejection and chargeback deadline, containing information on completed (0236), rejected (0237), cancelled (0238), charged back and rejected disbursement to debtor (0239), completed by payment slip (0297), and charged back by payment slip (0299).</li> </ul> <p><b>NOTE: Any rejected, cancelled, and charged back automatic payments are documented in the creditor information list or electronic information data, BS 0621.</b></p>
Data Delivery BS 0603 - Mandate information	<p>One of the following and only if there have been any registrations or cancellations since the last data delivery:</p> <ul style="list-style-type: none"> <li>• Daily for registered and cancelled mandates</li> <li>• Daily or monthly or both daily and monthly for all active mandates</li> </ul>
Data Delivery BS 0621 - Electronic information data	Daily - delivered on the morning of the day following registration of data in Betalingservice.
Data Delivery BS 0686 - Payment slip status	Daily

## Data delivery receipts

The data supplier receives a receipt for each data delivery that Mastercard Payment Services receives.

**Table 10: Receipts sent by Betalingservice**

Receipt	Description
T-file	Transmission receipt that confirms that the delivery has been received by the Mastercard Payment Services server and indicates if the transmission is valid or contains errors.
V-file	Validation receipt that indicates if the delivery has been set up in the correct format or contains errors. The V-file also indicates the number of records received and associated amounts.  <b>NOTE: Contact the Betalingservice customer service if the receipt contains any errors.</b>
D-file	Deliveries containing data for the supplier, for example, payment slip information.
F-file	Dispatch notes associated with data deliveries (D-files).
Z-file	Zipped or compressed data deliveries.  <b>NOTE: The recipient's Data Supplier agreement must be set up to receive data deliveries in zip format.</b>

Here is an example of a validation receipt. Note that the time stamp for the validation receipt is part of the receipt.

## Processing requirements

Here are a few guidelines to consider when using Betalingservice.

- Most alphanumeric fields are left-aligned with trailing spaces. However, depending on where it is reported, the customer number may be right-aligned with leading zeros or left-aligned with trailing spaces.

Specifically in few deliveries from Betalingservice (pertaining to Betalingservice and payment slips), such as Data Delivery BS 0602 and Data Delivery BS 0603, the customer number is right-aligned with leading zeros. Therefore, when the customer number is shared with the creditor in Data Delivery BS 0602 - Payment information, it is always right-aligned with leading zeros.

- The alphanumeric characters in the **Customer no.** field are always in upper case. Also, only Danish letters are allowed.
- Do not include the following:
  - &
  - Blank spaces
- The Subsystem field in the various data delivery start and end sections contains a code for the delivery specification, which identifies the system in Betalingservice to which the sent data applies. For deliveries done by data transmission, this is identical to the information sent in the net record. The designation of the subsystem is agreed upon when the Data Supplier agreement is set up. The default is subsystem BS1.
- The maximum size of a data file or delivery that a data supplier can send to or receive from Betalingservice is 2GB.
- The data records in the Betalingservice are 128 characters long. Only data delivery BS 0686 is 238 characters long.
- Always use the character set used for the operating system on which the creditor's program runs. For example, if a creditor is using the Microsoft Windows operating system, ensure that the ISO character set is used. Similarly, if the creditor is using the DOS platform, use the 850 (Multilingual) character set.
- Remove all trailing spaces in a data record and ensure the record ends with CR-LF (HEX 0D 0A) or UNIX = LF (HEX 0A) when constructing an ASCII data file for Betalingservice.

## Data delivery BS 0601 overview

Based on the creditor's agreement, the collection data provided for data delivery BS 0601 is used for the following.

- BS Automatiske betalinger (automatic payments)
- BS Indbetalingskort til Digital Post (payment slips to Digital Post)
- BS Indbetalingskort til e-Boks (payment slips for e-Boks)
- BS Indbetalingskort på papir (paper payment slips)
- Payments to debtors through Betalingsservice (requires that debtor has a mandate and permission from creditors bank)

Automatic payments and payment slips enable the creditor to deliver collection data to Betalingsservice for all debtors from whom collections are to be made, including the debtors' name and address information. Using the data, Betalingsservice creates collections for all debtors, either as automatic payments through Betalingsservice or as payment slips.

### Automatic payments

Automatic payments allow collections through Betalingsservice.

Creditors using only BS Automatiske betalinger (automatic payments) should use Data delivery BS 0603 –Aftaleoplysninger (mandate information) to ensure accurate collection delivery. Data delivery BS 0601 should only contain data for collection from debtors who have a mandate with the creditor. Ensure that you specify the mandate number in field 8 of data record type 042.

### Payment slips

BS Indbetalingkort (payment slips) are created if the debtor is not registered for BS Automatiske betalinger (automatic payments). Betalingsservice can send payment slips independently or by using Betalingsservice as a total solution (where collections that cannot be processed as automatic payments are sent out as payment slips). Ensure you include data record type 022 with the name and address on all your collections. The BS Indbetalingskort (payment slips) uses the slip type 71.

- Based on the preferences the creditor and debtor have specified, Betalingsservice can send out payment slips through various distribution channels:
  - Payment slips to Digital Post
  - Payment slips for e-Boks
  - Paper payment slips with fast dispatch
  - Paper payment slips with standard dispatch
  - Paper payment slips for abroad
- For automatic payments and payment slips, the payment date may be up to 90 days in the future.  
If you use Betalingsservice as a total solution and your customer has not signed up for Betalingsservice, the customer will receive a payment slip immediately after Betalingsservice receives delivery of BS 0601 with the collection data. If you only use Betalingsservice for

payment slips, the payment due date for the collection can be no earlier than one banking day after registration of the delivery in Betalingservice.

**NOTE: Betalingservice does not check whether the payment slip will be able to reach the debtor within the specified payment due date. This depends on the distribution channel chosen by the creditor.**

- Note that for automatic payments, Betalingservice can complete disbursements to debtors only if the debtor has a mandate. If Betalingservice has made payments to debtors who do not have a mandate, it creates an information list that includes the debtor's customer number, payment date, and amount. Using this information, the creditor can manage the disbursement.
- When using your own payment identification for payment slips, note that a modulus 10 check is used, where it is possible to submit payment slips with a separate payment identification that is entered in the OCR line on the payment slip. The payment ID is 15 right-aligned digits with leading zeros and with a modulus 10 check. The check digit is placed last.

## Guidelines for using data delivery BS 0601

Review these guidelines when using data delivery BS 0601.

- Collection data can be sent in BS 0601 or in XML format.
- Each delivery can contain a maximum of 9000 sections.
- If the collection data contains collections for several PBS numbers, the data delivery must be divided.
- You can only have one collection on a payment date for a customer. To collect several payments for the same customer number, create the collection with different payment dates.
- In data delivery BS 0601 – Collection data, it is possible to specify a reference for the individual collection. The reference is returned by Betalingservice in data delivery BS 0602 – Payment Information, together with the status of the collection. Note that for collections paid through:
  - Betalingservice - references of up to 30 characters are returned.
  - Payment slips - the first nine characters of the reference are returned.
- For automatic payments and payment slips, the text lines:
  - Must be related to the payment, for example, as a specification of consumption or amount.
  - Cannot contain text or links to promote other payment methods than the ones supplied by Mastercard Payment Services.
  - Must comply with existing regulations, such as provisions about unsolicited marketing in the Danish Act on Marketing (Markedsføringsloven).

If Mastercard Payment Services receives a text that does not comply with the guidelines, Mastercard Payment Services reserves the right not to include the received text.

- If needed, you can include a special notification text for payment slips as a request to register the payment with Betalingsservice. To use the separate text lines, the text must be submitted as data record type 062. Review the [Examples for data delivery BS 0601](#) to understand the structure of data delivery BS 0601 - Collection data with 062 data record types.

## Supported section types

Data Delivery BS 0601 supports section 0112 and section 0117.

- Section 0112 - This section is used for collections and it allows you to:
  - Specify text lines of 60-character length for notifications to debtors.
  - Specify payment due dates up to 90 days in the future.
  - Include up to five address lines, with one line for the postcode and country code on the payment slip.
  - Deliver two types of texts:
    - Data record type 052 for automatic payments.
    - Data record type 062 for payment slips in connection with Betalingsservice as a total solution.

**NOTE: If no 062 type data record is delivered by Betalingsservice, the text in 052 type data record is used for both Betalingsservice and payment slips.**

- Section 0117 - This section is used for payment slips and it allows you to:
  - Manage continual dispatch of payment slips with payment due dates on the first banking day after the delivery date.

## Supported section types

The type of payment (BS automatic payments or payment slips) determines the information that can be supplied in this data delivery.

It is possible to vary the data content used for data delivery BS 0602 to suit the individual creditor. The data delivery is divided into two sections:

- Section 0211 - Contains information about collections through BS automatic payments.
- Section 0215 - Contains information about payments using payment slips.

## Guidelines for using data delivery BS 0602

Review these guidelines when using data delivery BS 0602.

- Creditors who print their own payment slips with slip types 71, may enter as creditors in Betalingsservice.
- To determine the sequence of specified incoming payments, the data is sorted using:
  1. Customer number
  2. Bookkeeping entry date

## Supported section types

It is possible to vary the data content used for data delivery BS 0603 to suit the individual creditor.

Various types of mandate data can be used for data delivery BS 0603.

- Section 0210 - Active mandates  
Contains information on all registered mandates.
- Section 0212 - Registered and cancelled mandates  
Contains information on the mandates that have been registered and cancelled since the last creation of data delivery BS 0603. This section may contain a registration as well as a cancellation for the same mandate so the customer's system should be capable of handling multiple registration and deletion dates. The cancelled mandates indicate if they are:
  - Transaction code 0232 – cancelled by the bank
  - Transaction code 0233 – cancelled by the creditor
  - Transaction code 0234 – cancelled by Betalingservice

## Section types and transaction codes

This section provides a summary of the various section types and transaction codes for data delivery BS 0603.

## Guidelines for using data delivery BS 0605

Review these guidelines when using data delivery BS 0605.

- For registration, data delivery BS 0605 can be sent to Betalingsservice continually, several times a day.
- When sending data delivery BS 0605, ensure data delivery BS 0601 – collection data for the next collections has not been submitted.
- **Customer no.** in data delivery BS 0605 must be in upper case if the creditor uses alphanumeric characters and can include only Danish letters. If the creditor delivers alphanumeric customer numbers using lower case, Betalingsservice will convert these to upper case.

**NOTE: Alphanumeric characters do not include & and blank spaces.**

## Supported section types

Data delivery BS 0605 supports section 0105, section 0120, section 0125, and section 0126.

- Section 0105 - This section is used to Stop automatic payments. After the data delivery deadline for payments has passed, the creditor can submit the **Stopping a payment** transaction type for an individual debit transaction. The transaction for stopping the payment must be received and registered by Betalingservice no later than **the banking day before the payment due date**.
- Section 0120 - If needed, the creditor can incorporate a registration function for his own customers on his website. Read more about BS Tilmeldingslink at [www.betalingservice.dk](http://www.betalingservice.dk).
- Section 0125 - This section is used to change mandates.
  - Change of Customer number - If the creditor changes a customer number, the number registered with Betalingservice must be modified to match. To do this, a change transaction containing the customer number must be included in Data Delivery BS 0605.
  - Transfer of mandate - If you are transferring the customer number from one PBS number to another, you must [contact](#) a consultant at Betalingservice.
- Section 0126 - A creditor can use this section type to cancel mandates. The cancellation reason can be the end of the customer relationship or that the mandate was registered with an unknown customer number. The transaction code used is significant to indicate the reason for cancellation that Betalingservice passes on to the debtor's bank.

## Guidelines for using data delivery BS 0605

Review these guidelines when using data delivery BS 0605.

- For registration, data delivery BS 0605 can be sent to Betalingsservice continually, several times a day.
- When sending data delivery BS 0605, ensure data delivery BS 0601 - collection data for the next collections has not been submitted.
- **Customer no.** in data delivery BS 0605 must be in upper case if the creditor uses alphanumeric characters and can include only Danish letters. If the creditor delivers alphanumeric customer numbers using lower case, Betalingsservice will convert these to upper case.

**NOTE: Alphanumeric characters do not include & and blank spaces.**

- Ensure you sign up for each PBS number for using this record layout by contacting customer care at +45 8081 0707. If you have not used the solution for the last 15 months, you will need to sign up again.

## Chapter 11 Data delivery BS 0621 - Electronic information data

*Data delivery BS 0621 contains feedback from Betalingsservice on data sent in delivery type BS 0601 (collection data to Betalingsservice) and delivery type BS 0605 (mandate information to Betalingsservice). Data delivery BS 0621 also contains information about certain transactions created by Betalingsservice, for example, automatic deletion of mandates that have not been active for 15 months. Feedback is provided in the form of a numerical code. The numerical code refers to an error text that is distributed separately to the creditor or data supplier in an error text register.*

## Guidelines for using data delivery BS 0621

Review these guidelines when using data delivery BS 0621 - electronic information data.

- Creditors may use the material in data delivery BS 0621 in their own software for the updating and maintaining data.
- Where creditors use alphanumeric characters in customer numbers, these will always appear in upper case in the **Customer no.** field.
- Although alphanumeric fields are usually left-aligned with trailing spaces, in deliveries from Betalingsservice the customer number is right-aligned with leading zeros (even though the **Customer no.** field is alphanumeric).

## Supported section types

Data delivery BS 0621 - electronic information data is divided into three sections; information material, notification of noncompleted payment, and text register.

Here are the sections included in data delivery BS 0621.

- **Section 0120 - Information and receipt**

This section is created each time:

- A creditor or data supplier sends data using data delivery BS 0601 (collection data to Betalingsservice).
- A creditor or data supplier sends data using data delivery BS 0605 (update information to Betalingsservice).

- **Section 0150 - Information about disbursement to debtor**

This section is created when Betalingsservice has received disbursement for a debtor in data delivery BS 0601 and these cannot be completed because the debtor has not registered for automatic payment.

- **Section 0229 Betalingsservice text register**

This section contains the error text numbers and actual error texts and is created:

- If a creditor asks for it, when they start using data delivery BS 0621.
- If there are changes to the text register.
- If a creditor requests Betalingsservice for the text register.

## Structure details

Data delivery BS 0621 contains the same information that is on the **information list** for creditors (if created). If a transaction contains several errors, one data record is shown per error type.

The text code is a six-digit number where each digit represents a different value.

**Table 84: Text code structure**

Location	Description
First digit	Denotes the stakeholder. A value of 2 represents the creditor.
Second digit	Represents the list type. Possible values: <ul style="list-style-type: none"> <li>• 1 = Control information</li> <li>• 2 = Remarks</li> <li>• 3 = Information containing errors</li> </ul>
Last four digits	Indicates the level: top level and sublevel.

Here are a few examples of text codes:

- In 220100, the final digits 00 indicate that it is the top level. There are no levels below, so the text for the top level will always be used.
- In 221230, the final digits 30 indicate that this is a sublevel to 221200. Because group number 12 has sublevels, a text code with a text number other than 00 will always be indicated in the transaction. The delivery does not contain a higher level.

## Guidelines for using data delivery BS 0686

Review these guidelines when using data delivery BS 0686.

- If there is no data, data delivery BS 0686 is not created.
- Errors related to the payment slips are not mentioned in data delivery BS 0686.
- Usually, alphanumeric fields are left-aligned with trailing spaces. However, when specifying the **Customer no.** in data delivery BS 0686, the values are right-aligned with preceding zeroes. This also applies to alphanumeric customer numbers.

## Supported section types

Data delivery BS 0686 contains status on the multiple payment methods.

- **Section 0195 - Delivered as payment slips in e-Boks/Digital Post**  
If a payment slip is rejected by e-Boks/Digital Post, Betalingsservice will send a paper payment slip to the customer instead. See *Section 194*.
- **Section 0198 - Delivered as payment slips in e-Boks/Digital Post with payment link**  
Delivered to e-Boks/Digital Post with payment link.
- **Section 0194 - Delivered in e-Boks/Digital Post but rejected (Betalingsservice has printed the payment slip)**
  - If you are a sender with mandatory registration (afsender med obligatorisk), all payment slips will be sent to e-Boks. Neither Betalingsservice nor e-Boks will validate the authenticity of the CPR or CVR numbers. e-Boks creates mailboxes for all CPR and CVR numbers for which documents are sent. If a customer has not enabled their e-Boks mailbox, Betalingsservice will send out payment slips on paper instead.
  - If you are a sender based on the law of Digital Post and, for example, your customer has passed away.
  - If you are a sender with nonmandatory registration (afsender med frivillig tilmelding), this section will contain details of customers who have either unsubscribed from e-Boks or passed away. Betalingsservice will then send out paper payment slips to the customers instead.
- **Section 0192 - Digital Post – Memo information for BS Indbetalingskort**  
Betalingsservice creates a UUID message and this section will contain the UUID message for each customer number handled in section 0195 and not rejected by Digital Post. Typically, this is created a banking day after you have received section 0195.
- **Section 0197 - Delivered as paper payment slips**  
Delivered as a paper payment slip to your customer.
